FEATURES
- Delay adjustable in 31 steps
- Delay step sizes of 0.5ns to 3ns available
- Fast rise time for high frequency applications
- I/O reversible
- F-type female connectors
- Meets or exceeds MIL-D-23859C

FUNCTIONAL DESCRIPTION
The 3D10000 device is a single-input, single-output, passive delay line. The signal input (IN) is reproduced at the output (OUT), shifted by a time \( T_D \) which can be adjusted via five binary-weighted switches. The value of these switches, multiplied by the device dash number, determines the device delay (referenced to the delay with all the switches off). The characteristic impedance of the device is nominally 75-ohms.

SERIES SPECIFICATIONS
- Total Delay Tolerance: 3%
- Minimum Delay (all switches off): 12ns
- Impedance: 75Ω
- Ripple in pass-band: Approx. 0.2dB
- Dielectric breakdown: 100 VDC
- Operating temp: -65°C to +125°C
- Temperature coeff: <100 PPM/°C
- Case dimensions: 17” x 13” x 5-1/4” (43.2cm x 33.0cm x 13.3cm)

PASSIVE DELAY LINE TEST SPECIFICATIONS

TEST CONDITIONS

INPUT:
- Ambient Temperature: 25°C ± 3°C
- Input Pulse:
  - High = +0.5V typical
  - Low = -0.5V typical
- Source Impedance: 50Ω Max.
- Rise/Fall Time: 3.0 ns Max. (measured at 10% and 90% levels)
- Pulse Width: \(PW_{in} = 100\text{ns}\)
- Period: \(PER_{in} = 1000\text{ns}\)

OUTPUT:
- \(R_{load}\): 10MΩ
- \(C_{load}\): 10pf
- Threshold: 50% (Rising & Falling)

NOTE: The above conditions are for test only and do not in any way restrict the operation of the device.
